TOTAL WASTE MANAGEMENT SYSTEMS

USIT has implemented numerous successful TWM programs throughout North America. A dedicated Project Manager will collaborate with the customer to develop a customized program to meet their specific needs. USIT will complete a detailed on-site audit reviewing all generated by-products including hazardous, non-hazardous, universal waste, trash, recyclable commodities and medical waste. With USIT as your partner you can reduce costs, improve compliance and minimize your waste streams. It is our goal to eliminate the challenges associated with environmental management at your facility. We can help you save time and resources without sacrificing results.

ZERO LANDFILL SOLUTIONS

USIT offers a comprehensive audit system that evaluates each individual by-product stream for potential reuse options. A customized report will outline your current processes along with various alternative options to help accomplish your environmental goals. Whether your company is looking to implement a waste minimization program, meet your ISO 9001/14001 requirements or achieve Zero Landfill status, USIT will collaborate with you to create a sustainable and cost effective program.

RECYCLING/RE-USE PROGRAMS

U.S. Industrial Technologies specializes in custom industrial waste recycling programs. With our nationwide network, USIT can provide options such as;

- Parts Washer Recycling • Absorbent Recycling • On-site Oil Recycling • Aerosol Can Recycling
- Isocyanate Recycling • Alternative Fuels and Raw Materials • Universal Waste Recycling
- Asset Recovery • Waste to Energy • Cardboard / Paper / Plastic Commodity Recycling
- Air Filter Cleaning/Recycling • Gas Cylinder Recycling • Solvent Recycling • Scrap Steel Recycling

HAZARDOUS & NON HAZARDOUS WASTE DISPOSAL/RECYCLING

USIT's network of treatment and disposal facilities offers simple, safe and cost-effective solutions for all your hazardous and non-hazardous waste streams. USIT offers the widest range of hazardous and non hazardous waste disposal options and waste treatment capabilities to provide customers with the best options for their needs.

HAZARDOUS & NON HAZARDOUS WASTE TRANSPORTATION

Our fully licensed and insured fleet can provide cost effective transportation options whether you are moving just a few drums or shipping bulk solids/liquids. USIT has an extensive network of less-than-truckload (LTL) routes that span much of the country and offer the most cost effective means of pick-up and delivery. In addition to our LTL program, we have access to everything from tanker trucks to gravel trains to roll off containers. As part of our value-added service, USIT can also prepare all of the necessary shipping documents associated with your material.

LAB PACK/CHEMICAL REMOVAL, TECHNICAL FIELD SERVICES

Our Technical Field Service teams specialize in the proper classification, packaging and transportation of lab pack waste. USIT chemists carefully complete all paperwork, including packing lists, hazardous waste manifests, labels and land disposal restriction forms. Once reviewed and approved by the generator, our chemist will transport the waste to a state-of-the-art depack facility or incinerator for processing. By utilizing our depack facility, USIT can consolidate and repackage waste material, allowing customers to gain a significant costs savings while still maintaining safe and proper waste disposal.

CONTROLLED SUBSTANCE DISPOSAL/DESTRUCTION

Managing unwanted pharmaceuticals can be confusing! Each individual product must be evaluated against numerous regulatory programs including;

- DEA - Controlled substance
- RCRA - Hazardous waste
- State-Specific Regulations - Universal waste
- DOT – Transportation

As a registered DEA Reverse Distributor, USIT can alleviate the pressure on the generator by providing trained chemists to help classify, package and transport these waste for destruction.

INDUSTRIAL SERVICES/INDUSTRIAL CLEANING

With a fully trained and experienced staff, USIT can manage all of your industrial service needs. Our extensive fleet of specialized equipment can handle all levels and types of cleaning. USIT can reduce costs and minimize liability by managing your project from the point of waste generation through transportation and disposal.

MOP WATER RECYCLING

Why pay to transport and dispose of your dirty mop waste water when you can filter and reuse it? USIT can provide your company with a fully automated recycling system that will filter out dirt and light oils. Once filtered, the cleaned affluent can be reused for floor scrubbing applications or discharged to the local POTW. This process eliminates the need for transportation, disposal, as well as purchasing new soaps and water.

LEADERS IN ZERO LANDFILL SOLUTIONS

ABOUT U.S. INDUSTRIAL TECHNOLOGIES

Established in 1996, U.S. Industrial Technologies, Inc. is a fully licensed and insured total waste and recycling company headquartered in Livonia, Michigan. USIT offers by-product solutions to a diverse customer base, which includes many Fortune 500 companies, small businesses, and numerous Federal, State, and local government agencies.

USIT is built on a proven history of extensive expertise in the hazardous waste management industry. We recognize the importance of providing customers with the highest level of service, which is why our entire organization is focused on unprecedented customer satisfaction. Our experienced staff has the ability to manage all by-products created at your facility. We have experience in a wide variety of industries, and as a result have the unique ability to offer recycling alternatives typically not obtainable in the industry.

Our mission is to help you lower by-product management costs at your facility using the most secure disposal and recycling options available, while providing quality and professional customer service.
